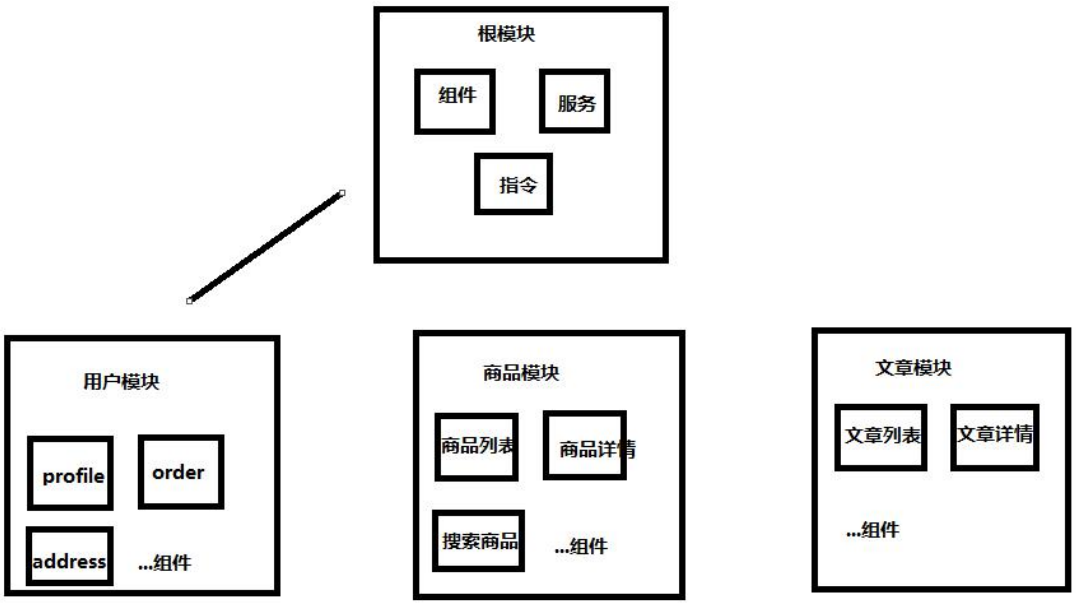
Angular 自定义模块以及配置路由实现模块懒加载

主讲教师：（大地）
合作网站：www.itying.com （IT 营）
合作网站：www.ionic.wang （Ionic 中文网 ）



创建模块：

ng g module module/user --routing

ng g module module/article --routing

ng g module module/product --routing

创建组件：

```
ng g component module/user

ng g component module/user/components/profile

ng g component module/user/components/order

ng g component module/article

ng g component module/article/components/articlelist

ng g component module/article/components/info

ng g component module/product

ng g component module/product/components/plist

ng g component module/product/components/pinfo
```

配置懒加载-(具体配置看教程演示)：

```
import { HomeComponent } from './components/home/home.component';
const routes: Routes = [

    {
      path:'',component : HomeComponent
    },

    {
      path:'user',
      loadChildren: () => import('./module/user/user.module').then(m => m.UserModule)
    }

];
```
